Penaeus monodon, the **giant tiger prawn**, The natural distribution is [Indo-West-Pacific](#), ranging from the eastern coast of [Africa](#), the [Arabian Peninsula](#), as far as [South-east Asia](#), the [Sea of Japan](#) and northern [Australia](#). In 2010, [Greenpeace](#) added *Penaeus monodon* to its seafood red list - "a list of fish that are commonly sold in supermarkets around the world, and which have a very high risk of being sourced from unsustainable fisheries"

Size: This is the largest commercially available shrimp, reaching 330 mm or more (13 inches).

Distribution: This major Indo-West Pacific species is distributed over a huge range from East and Southeast Africa, through the Red Sea and Arabian Gulf, around the Indian subcontinent, and throughout the Malay Archipelago to

Comments: Monodon is traditionally important in the fisheries of most of the Asian countries where it is found, especially in India, Bangladesh and Malaysia. It is also of important for Australian fisherman.

Japanese consumers are appreciating on the consumption of this species because of the bigger size comparatively by price.

Monodom turns bright red when cooked and the shell retains its color for several days when refrigerated after cooking. The flower is good texture is little soft.
